

Aviation Maintenance

Requirements

Sponsor Organization: AFS

TCRG Lead: Dave Cann

Title: Human-Centered Graphics and Web-based support for Guidance Materials on Human Factors in Maintenance

Description of Requirements:

CSTA Aviation Maintenance Human Factors needed assistance with a human factors aviation maintenance document.

Background:

FAA (AFS300/340 and The Chief Scientist for HF are cooperating with an industry/government working group to create a straightforward document to facilitate implementation of Human Factors programs in maintenance. Since FAA has created 15,000+ pages of scientific and semi-scientific reports the industry is now looking for a very simple "How to manual." In fact, the document and associated website may be called something like: "Operator's Manual for your Human Factors Program".

Output:

Convert FAA document "Operators Manual for Human Factors in Maintenance" to printable web-based documentation.
